

Mesure

Méthode d'estimation de la survie relative

Items for inventory

Meeting Paris : 13 mars 2009

objective of the project

- 1: Comparison of the actual methods used to estimate relative survival
- 2: Extension and development of statistical methods used to estimate relative survival.
 - (a) statistical researches
 - (b) to develop statistical programs to perform relative survival analyses
- 3: Production of guidelines for cancer survival analysis with population-based data, answering to public health considerations

Field

- Cancer
 - Population based studies
 - Clinical trial
- Others diseases

Methods

- Voir : L Remontet, G Hedelin , ...

Life tables

- Mathematical methods
- Which variables are available

Data about cancer

- Standardisation
 - Data collection
 - Which variables
- Quality control

Follow Up

- Standardisation
 - Data collection
 - Which variables

- Quality control
